## Playing back WAV-files in other formats than 16-bit integer

This document provides instructions on how to circumvent play-back limitations in all versions of the W-CODE Media Player. The limitation prevents play back of WAV-files using sample formats other than 16-bit integer.

An attempt to open a WAV-file with another format than 16-bit integer will produce an error messages as depicted below, and a correspond-

ing error message is displayed at the bottom of the Media Player window. Please notice that Media Player will not display the actual bits per sample for the file reported as invalid.

Be aware that some soundcard loudspeaker outputs will be muted if a plug is inserted into the audio output jack.

## Workaround A: Use W-CODE “Custom Inputs”

In contrast to the current versions of the Media Player, the W-CODE Custom Inputs supports 24-bit and 32-bit integer sample formats in addition to 32-bit float format.

Follow these steps to play-back the file via Custom Inputs

- ◆ Close any open decoder
- ◆ From Configuration select Custom Inputs
- ◆ In the Custom Inputs window click Add
- ◆ If desired rename the new custom input
- ◆ In the parameter pane select or enter values as appropriate. Device must be set to File and Type to PCM
- ◆ From File select the desired decoder or function
- ◆ From Demodulator select Input...
- ◆ Select the input named in Step 4
- ◆ The file will now be played back if it is in a supported format

## Workaround B: Use Windows Media Player

Windows Media Player (WMP) supports a considerable number of sample formats. In order to use WMP to play back WAV-files not supported by W-CODE Media Player, follow these steps

- ◆ Connect an audio cable between the input and output jacks of the PC soundcard
- ◆ Open W-CODE
- ◆ From File select the desired function or decoder
- ◆ Open WMP
- ◆ Select the WAV-file to be played back
- ◆ Start WMP
