# WAVECOM® W-CODE

W-CODE provides all functions required to classify, analyze, record, decode and process radio data communications in real-time, throughout the entire radio spectrum from ELF to SHF. W-CODE is the standard decoder software for all Wavecom products.

W-CODE
Signal Analysis and Processing

WAVECOM®
NACHRICHTENTECHNIK

W-CODE Features and Facts

- ♦ W-CODE provides powerful signal analysis, signal processing and decoding, all *in real-time*
- ♦ Automatic classification, code check, demodulation and decoding to content level (text, live voice and image etc.) of signals
- ♦ Signal overview using real-time FFT spectrum, waterfall displays and manual signal measurements
- ♦ Automatic code check of known signals and unknown, pre-defined signals
- ♦ Supports more than 226 HF, VHF, UHF and satellite decoder modes and protocols without additional, costly licensing
- ♦ Supports worldwide remote monitoring of radio transmissions in any frequency band, anywhere via Internet, Ethernet-LAN, Wireless-LAN or Leased Lines
- ♦ Supports W-CLOUD high-quality I/Q data streams from a remote receiver
- ♦ Supports SDR (Software Defined Radio) I/Q data or external digital input
- ♦ Supports TCP/IP input streams using IP-CONF, GEW PXGF, ANSI/VITA-49, Virtual Audio Cable (VAC), WiNRADiO digital Virtual Sound Card (VSC) and host native sound card input with sampling rates of up to 192 kHz
- ♦ Supports W-PCIe and W-PCI dual and W74PC quad internal digital down converters (DDCs) up to 87.5 MHz
- ♦ Tested with a number of SDRs, e.g. WiNRADiO G39DDC, G33DDC, GEW GRXLAN, Perseus, RFSpace products, Rohde & Schwarz and MEDAV LR2
- ♦ Supports direct input and output of WAV files from integrated, digital Wavecom Media Player/Recorder.
- ♦ Decoded output can be saved to files or transferred to an external application using the XML based Remote Control Interface
- ♦ Multi-mode feature supporting up to eight simultaneous W-CODE instances
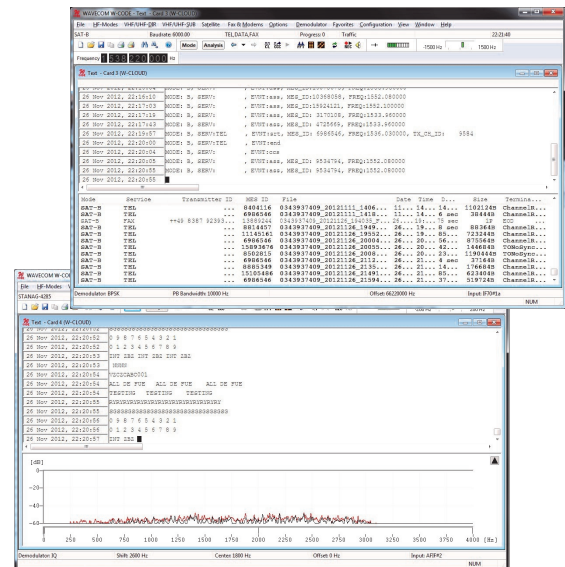

*Worldwide monitoring with W-CODE and W-CLOUD*

Signal Sources and Devices

The *W-CODE Device Selector* supports a great number of input interfaces and devices, e.g. IF I/Q streams produced by many receivers, Virtual Audio Cables (VAC), TCP/IP interfaces, W-CLOUD I/Q streams and the DDC signals of W-PCIe, W-PCI and W74PC. The number of supported interfaces is continuously growing. Using W-CODE prevents the locking to proprietary devices of software producers.

Today there is a demand for wideband storage which is met by directly connecting SDRs to low-cost hard disks. WiNRADiO G33DDC and G39DDC will for instance store bandwidths up to 4 MHz. W-CODE offers storage of narrow bandwidth I/Q streams up to 96 kHz using its native Media Player/Recorder. Expensive external and exotic recording devices belong to the past.

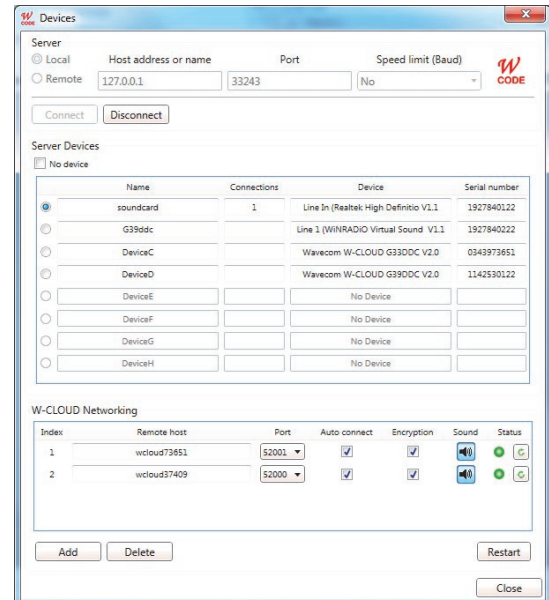

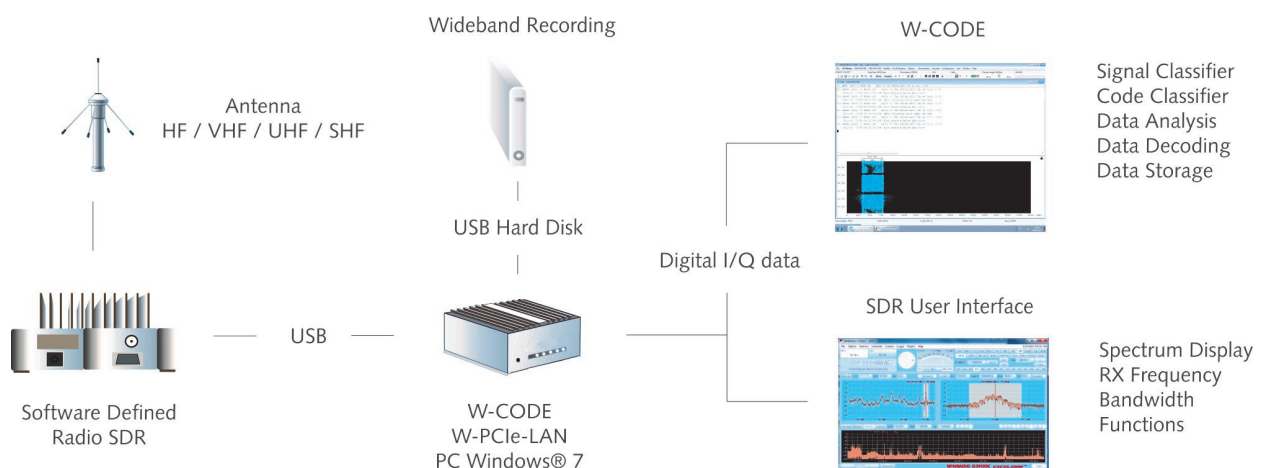

Quick and easy signal source settings
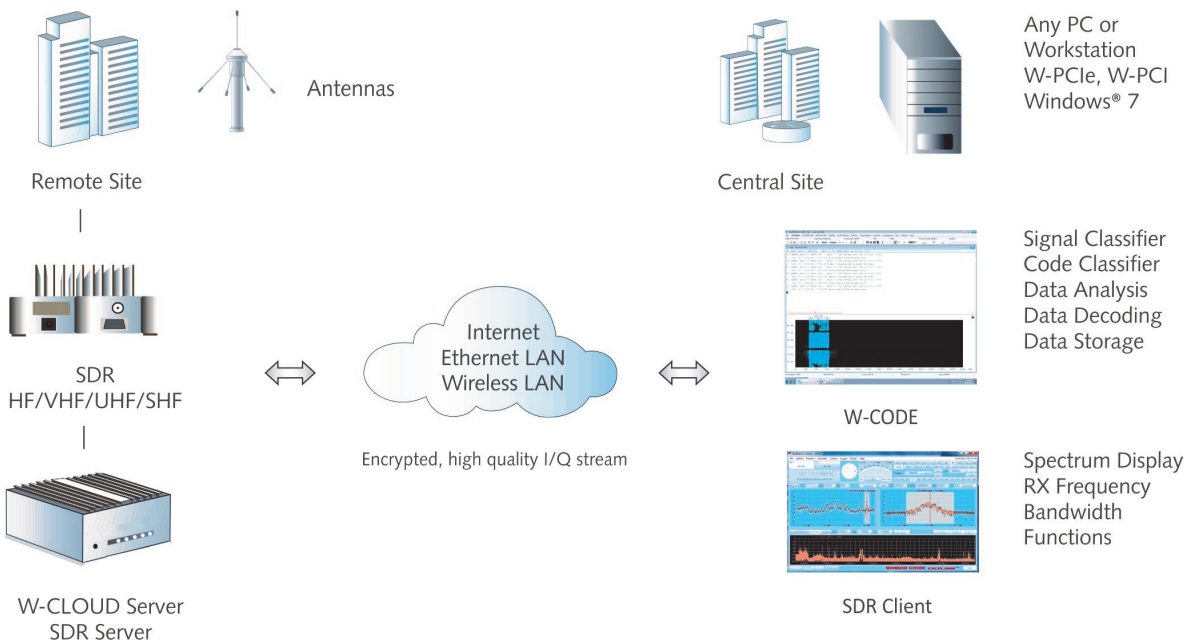

Example setup for remote signal acquisition using W-CLOUD and W-CODE

W-CODE
Signal Analysis and Processing

Signal Sources and Devices

In this setup W-CODE and W-PCIe-LAN works to-gether with a Software Defined Receiver (SDR) via its direct IF I/Q interface. It is also possible to use a universal Virtual Audio Cable (VAC) as in-terface. Additional hardware is not required for this software only solution. The W-PCIe-LAN may even be replaced by a standard PC or work-station. Because data is digitally processed, any loss of decoding quality can be avoided.

Functions

Satellite communication decoding is also possi-ble using W-CODE and W-PCIe, W-PCI or W74PC. In this configuration the interface card acts as a dual Direct Down Converter (DDC). The receiving frequency is automatically and directly controlled by W-CODE.

Wideband and Narrowband Recording

Example setup including a WiNRADiO G39DDC SDR for *wideband recording* of up to 4 MHz on a 3-4 TB hard disk via a standard USB 2.0 interface. Any off-the-shelf hard disk will do whether it is internal or connected via USB, LAN or W-LAN.
The W-CODE *Media Player/Recorder* records and saves signals from the selected input to digital I/Q WAV files. During playback of WAV files the signal is sent unprocessed to W-CODE and an audio signal is available for simultaneous monitoring. The Media Player/Recorder complements the rich analysis functions available in W-CODE.

Automatic Spectrum Analysis, Classification and Decoding

Powerful analysis and classification unit

Automatic spectrum analysis and signal classification process is winning more and more importance nowadays. It can conduct spectrum monitoring both in wide range (bandwidth) and round the hour with great preciseness and efficiency. This space and time advantage outperforms clearly a human operator, although the later has certain skill and experience.

W-CODE signal classification tools include:
♦ W-Spectrum Analysis (SA)
♦ W-Classifier-NB (Narrowband)
♦ W-Classifier-WB (Wideband)

W-Spectrum Analysis (SA) can detect and measure all signals in a selected bandwidth with measuring parameters such as center (Hz), signal bandwidth (Hz), signal level (dB) and

detection confidence (in percent).

Each signal can further contain a number of sub-signals with their parameters again.

W-SA is integrated in FFT and FFT / Sonagram displays for all radio bands (HF, V/UHF, SAT etc). Detected signals are marked with their sub-signals and parameters.

Results of all detected signals and their sub-signals are delivered on the remote control interface (XML RCI) as well for third-party development.

Detected signals can be saved with their time-stamp as a structured XML file for database compatible display and analysis.
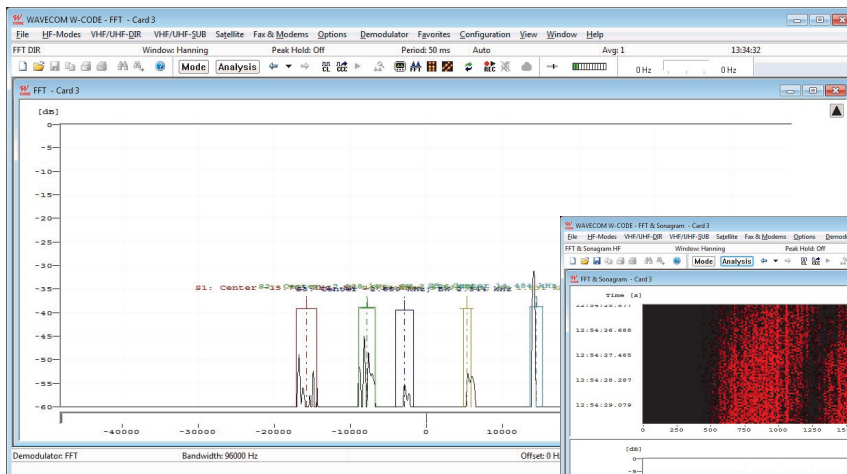

W-Spectrum Analysis detects 5 signals in an HF band (96 kHz bandwidth)
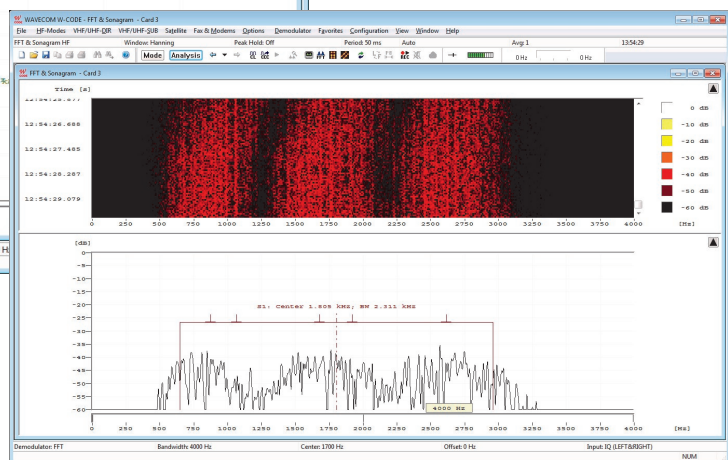

W-Spectrum Analysis detects one STANAG-4285 signal with its sub-signals, display bandwidth 4 kHz

WAVECOM®
NACHRICHTENTECHNIK

Automatic Spectrum Analysis, Classification and Decoding

Powerful analysis and classification unit

*W-Classifier* measures a signal in its parameters:

♦ Modulation type

♦ Baud rate or symbol rate

♦ Signal center frequency

♦ Number of carriers

♦ Frequency shift

♦ Carrier spacing or distance

♦ CW-Morse detection

♦ 8 kHz bandwidth (W-Classifier-NB, WCL61PC)

♦ All signals within the classifier bandwidth

are processed

Additional functions for wideband classification (W-Classifier-WB)

♦ Bandwidth up to 96 kHz

♦ Voice detection AM, FM, USB and LSB. Demodulated voice output to the speaker for live monitoring

♦ Baud rates up to 60 kBd
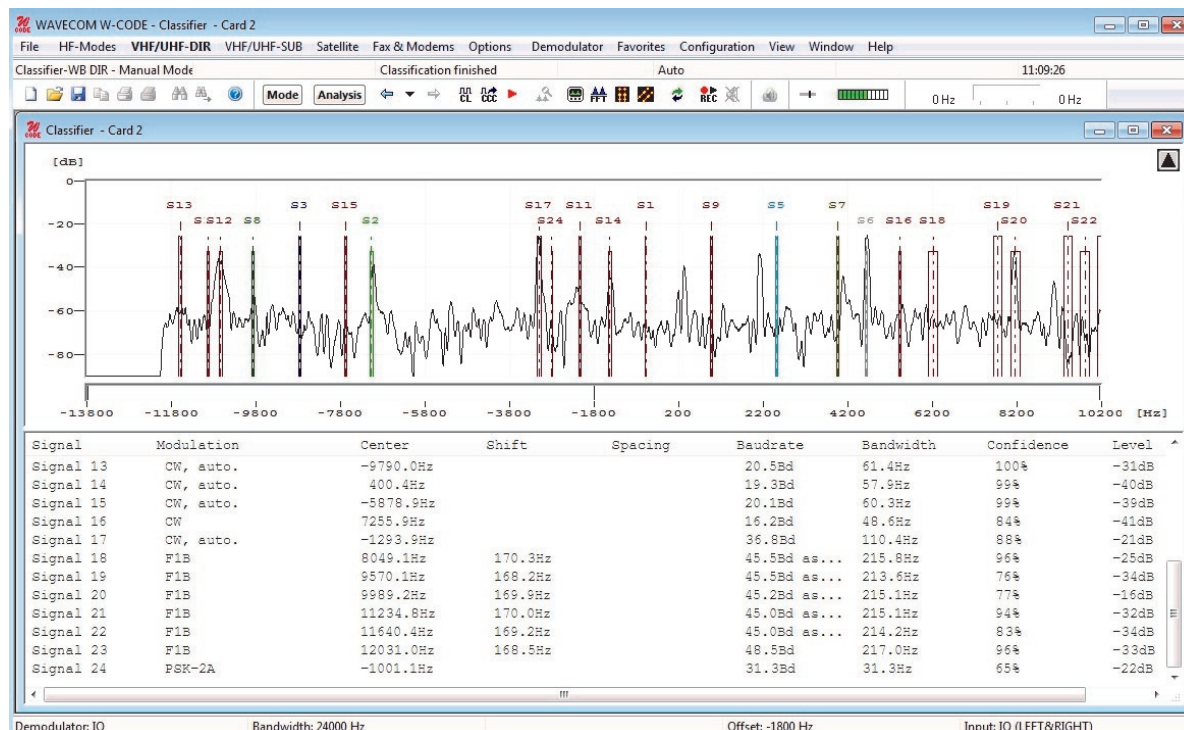

Wideband-Classifier display containing 24 identified signals
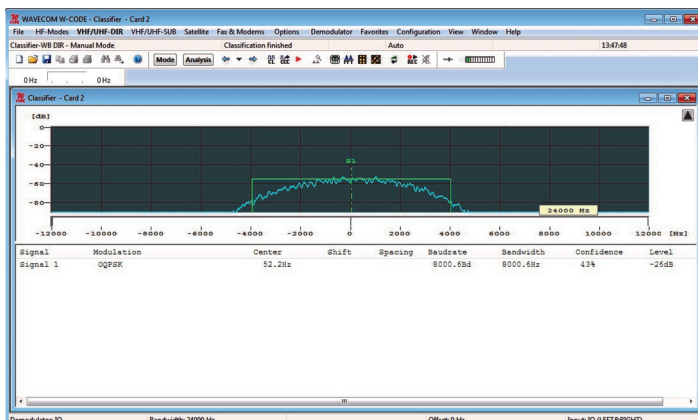

W-CODE
Signal Analysis and Processing

Automatic Spectrum Analysis, Classification and Decoding

Powerful analysis and classification unit

The Classifier also offers a number of signal visualising functions like symbol display, display of real and imaginary components of the analyzed signals, baud rate spectrum and differential symbol display in a phase plane. Signal parameters can also be measured manually.
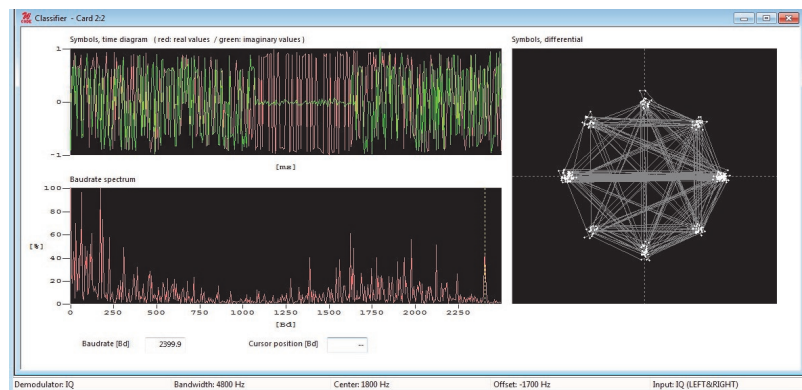

Classifier with 2,400 Baud 8-PSK STANAG-4285 HF signal

Analysis of an 8,000 Baud GMSK TETRAPOL signal

The monitored frequency band is displayed in a spectrum plane. After classification has completed, the classified signals are listed below the spectrum display.

</div>

Automatic Spectrum Analysis, Classification and Decoding

Powerful analysis and classification unit

The *Classifier-Code-Check CCC* is a versatile analysis tool for the classification of known and unknown signals and the determination of the mode in use. The CCC will attempt to process all signals within the bandwidth of the classifier. The classifier attempts to classify the input signals according to their modulation formats. The table check works through the signals against the entries of the selected mode list. The code check will attempt to synchronize against classified modes, finally the signal will be forwarded to a decoder for output.
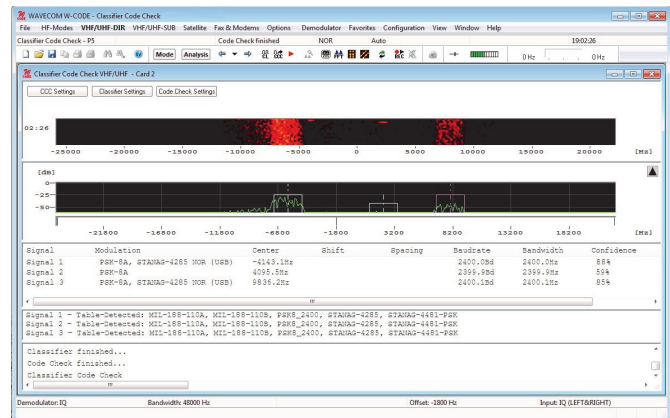

A *CCC Table Editor* allows extending, modifying or deleting records in the database used for mode look-up. An input template containing all important parameters is available for each modulation type. All parameters, the record name and the file name are user selectable.

The *Signal Parameters Editor* allows the entry of an unlimited number of transmission modes, protocols in an XML tables. Any table can be loaded from the Code-Check-Settings menu. Tables are composed according to their frequency range (HF, VHF/UHF DIR, VHF/UHF SUB or satellite).

WAVECOM®
NACHRICHTENTECHNIK

Real-time Decoders and Demodulators

The implementation of complex systems for monitoring is only limited by the number of decoders and the performance of the hardware and software. A wide range of system default settings can be configured, e.g., input signal level, measuring interval, center frequency and demodulator type. W-CODE contains more than 230 transmission modes, all available in a standard package, not requiring any additional license.

Measurement and Analysis

The determination of signal charac-teristics is assisted by a large number of analysis and measurement func-tions. The numerous integrated anal-ysis tools contain several different methods and visualization options for HF, VHF, UHF, SHF and satellite emissions. The GUI assists the opera-tor in analyzing the important signal parameters. Dynamic zoom functions allow magnification of details in any selected window and the scroll buff-ering feature makes it possible to move backward and forward in time over the input signal.

Simultaneous Processing of Multiple Signals

W-CODE allows up to eight simultaneous instances and inputs on the same host PC or workstation. The instances are completely independent. DDC or SDR may provide the input signal, additional hardware is not required. W-CODE license is measured on its decoding capacity. Each instance occupies a license when running.

An advantageous "Workstation License" with a proper number of licenses can be configured on one single license carrier (USB dongle). This can be plugged in a PC, all W-CODE instances in a same network can capture licenses from the license carrier in a first come-first serve fashion.
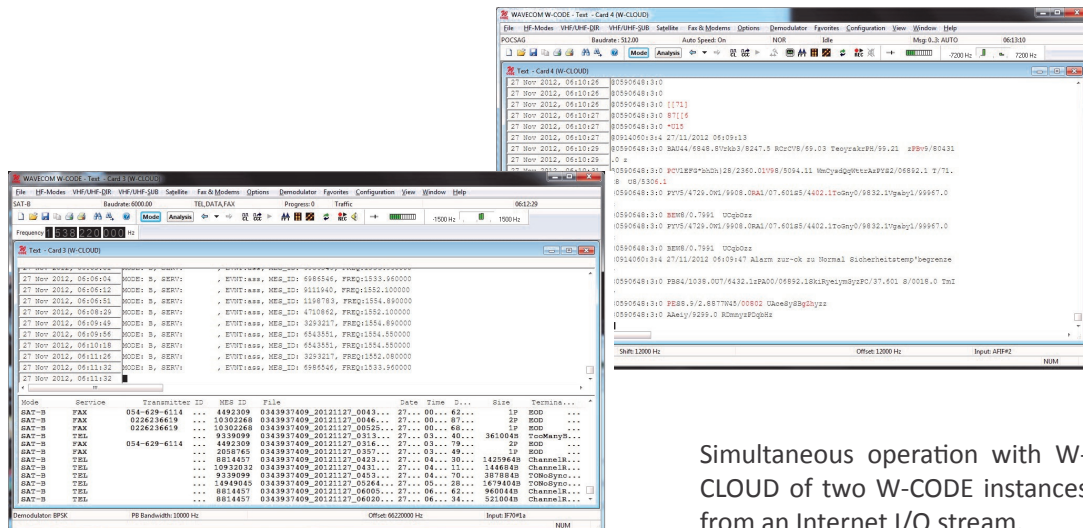

Simultaneous operation with W-CLOUD of two W-CODE instances from an Internet I/Q stream.

Simultaneous decoding and symbol rate analysis using two W-CODE instances. This setup can be further expanded as required. W-PCI and W-PCIe also allow two inputs with complete DDC functionality. Software Defined Radio SDR multi-input is available since Software V9.0.00.

Analysis Functions

Autocorrelation up to 200.000 bits
Automatic analysis and decoding software for all data and FAX-G3 modulation types
Automatic CRC recognition of all PACTOR-II and PACTOR-II-FEC systems
Automatic message type detection (ITA-2, ITA-5 and sync/async), LSB/MSB for STANAG and MIL-STD modes
Bit correlation analysis. Raw FSK analysis - graphical display of demodulated data on a raster time line. For visual recognition of character and block lengths
Bit length analysis. Graphical display of demodulated data, with automatic calculation of bit length and bit pattern display
Code check for PSK, FSK, MFSK and MIL-STANAG modes
Manual measurement of the frequency shift(s) with movable cursors
Oscilloscope, real time, resolution up to 200 us/div

MFSK analysis graphical display of MFSK tone spectrum with histogram
Phase plane analysis HF BPSK, QPSK, OQPSK, DPSK and I/Q 10-2400 Baud
Phase plane analysis VHF/UHF-DIR BPSK, DPSK, QPSK and OQPSK 100-12000 Baud
Phase plane analysis VHF/UHF-SUB BPSK, QPSK, OQPSK, DPSK and I/Q 50-4000 Baud
Real-time FFT, averaging: 1-64 values, bandwidth 0.5, 1, 2, 4, 24, 48 kHz and 96 kHz and adjustable cursors, 20 frames/sec
Sonagram and FFT tuning display
Sonagram, real-time display with cursor functions and history (full scrolling)
Sound card calibration tool
Graphical data display for selcal signal analysis
Waterfall, real-time display with cursor functions

Overall Software Characteristics

Media Player/Recorder, recording and playback of signals
ALARM MONITOR, automatically detected text-string saving to HD or network SMS output
Automatic insertion of time stamps (in 1 ms)
Synchronized PSK and FSK raw bitstream available through remote control interface
File formats TXT, JPG, BMP, Unicode, WAVECOM (with timestamps)
PSK, FSK and MFSK baudrate history display with full graphical recall, averaging and cursor functions
FSK shift history display with graphical recall, averaging and cursor functions
Configurable message type for most MIL-STD and STANAG codes
Pass-band filters in most modes
Pass-band tuning in FFT display in most modes
End-to-end decryption option to get clear voice and text output

Live voice to output decoded / decrypted voice to the speaker in real-time
SERIAL LINK, serial data output to PC serial interface COM 1 - 16
STANAG5066 parser in MIL-STD and STANAG codes
TCP/IP direct data (IQ and PCM) interface for streaming and for digital receivers (PXGF, IP-CONF, VITA-49)
TCP/IP remote control with Wavecom GUI, full functionality over LAN or Internet (encrypted and speed optimized)
Unlimited scroll-back buffers for text and graphics
Up to 8 decoders may be installed on one host PC
WiNRadio VSC and Virtual Audio Cable (VAC) support
Sound card input, 8-bit and 16-bit, 8 kHz to 192 kHz, stereo and mono left/right
License on a USB dongle or SD card
WAV files playback and decoding, loop mode
XML Remote Control Interface API for C++ and C#, XML over TCP/IP

WAVECOM®
NACHRICHTENTECHNIK

Since more than thirty years Wavecom Elektronik AG has developed, manufactured and distributed high quality devices and software for the decoding and retrieval of information from wireless data communication in all frequency bands. The nature of the data communication may be arbitrary, but commonly contains text, images and voice. The company is internationally established within this industry and maintains a longstanding, world-wide network of distributors and business partners.
